2 NSC – Memorandum DBE/November 2015

# PRINCIPLES RELATED TO MARKING LIFE SCIENCES

- 1. If more information than marks allocated is given Stop marking when maximum marks is reached and put a wavy line and 'max' in the right-hand margin.
- 2. **If, for example, three reasons are required and five are given** Mark the first three irrespective of whether all or some are correct/incorrect.
- 3. **If whole process is given when only a part of it is required** Read all and credit the relevant part.
- 4. **If comparisons are asked for but descriptions are given** Accept if the differences/similarities are clear.
- 5. **If tabulation is required but paragraphs are given** Candidates will lose marks for not tabulating.
- 6. **If diagrams are given with annotations when descriptions are required** Candidates will lose marks.
- 7. If flow charts or diagrams are given instead of descriptions Candidates will lose marks.
- 8. **If sequence is muddled and links do not make sense** Where the sequence and links are correct, credit. Where sequence and links are incorrect, do not credit. If sequence and links become correct again, resume credit.

### 9. Non-recognised abbreviations

Accept if first defined in answer. If not defined, do not credit the unrecognised abbreviation but credit the rest of the answer if correct.

### 10. Wrong numbering

If answer fits into the correct sequence of questions but the wrong number is given, it is acceptable.

11. If language used changes the intended meaning Do not accept.

### 12. Spelling errors

If recognisable, accept the answer, provided it does not mean something else in Life Sciences or if it is out of context.

- 13. **If common names are given in terminology** Accept, provided it was accepted at the national memo discussion meeting.
- 14. If only the letter is asked for but only the name is given (and vice versa) Do not credit.

Life Sciences/P2

3 NSC – Memorandum DBE/November 2015

# 15. If units are not given in measurements

Candidates will lose marks. Memorandum will allocate marks for units separately.

# 16. Be sensitive to the sense of an answer, which may be stated in a different way.

### 17. Caption

All illustrations (diagrams, graphs, tables, etc.) must have a caption.

# 18. Code-switching of official languages (terms and concepts)

A single word or two that appear(s) in any official language other than the learners' assessment language used to the greatest extent in his/her answers should be credited if it is correct. A marker that is proficient in the relevant official language should be consulted. This is applicable to all official languages.

### 19. Changes to the memorandum

No changes must be made to the memoranda without consulting the provincial internal moderator who in turn will consult with the national internal moderator (and the Umalusi moderators where necessary).

### 20. Official memoranda

Only memoranda bearing the signatures of the national internal moderator and the Umalusi moderators and distributed by the national Department of Basic Education via the provinces must be used.

TOTAL SECTION B: 80

Life Sciences/P2

12 NSC – Memorandum DBE/November 2015

# **SECTION C**

# **QUESTION 4**

# **PROTEIN SYNTHESIS**

# Transcription√ (T)

- Double stranded DNA unwinds  $\checkmark$
- and unzips when ✓
- the hydrogen bonds break ✓
- and this is controlled by enzymes√
- One strand is used as a template√
- to form mRNA√
- using free RNA nucleotides from the nucleoplasm√
- The mRNA is complementary to the DNA√
- mRNA now has the coded message for protein synthesis√

# Translation√ (S)

- mRNA moves from the nucleus √/to the ribosome
- Each tRNA carries an amino acid√
- tRNA carries the amino acid to the ribosome√
- When the anticodon on the tRNA✓
- matches the codon on the mRNA $\checkmark$
- Amino acids become attached ✓ in the sequence determined by the mRNA
- by peptide bonds√
- to form the required protein√

# **EFFECTS OF A MUTATION (M)**

- A gene mutation affects arrangement/type of the nitrogen bases √/nucleotides
- This changes the code on the DNA ✓
- which changes the code on the RNA√
- A different amino acid√ may be coded for
- which causes a change in the amino acid sequence ✓ in the protein
- leading to the formation of a different/alternate/no protein

- Max 4 (17)
- Content: (3)
- Synthesis: (20)

# ASSESSING THE PRESENTATION OF THE ESSAY

| Criterion                 | Relevance (R)                                                                                                                     | Logical sequence (L)                                                                                                         | Comprehensive (C)                                                                                                                                                                                           |
